Request For Information

Baynard Egg Collection – Through the generosity of the St. Petersburg Historical Society the University of South Florida received about 370 sets of eggs, mostly from Florida, and apparently all from the collection of the late Oscar E. Baynard. Most sets have dates and catalog numbers, but no locality information. The research value of these specimens would be much greater if full collecting data were available. Therefore it would be appreciated greatly if anyone knowing the whereabouts of Mr. Baynard's catalogues would contact me – *Glen W. Woolfenden, Department of Biology, University of South Florida, Tampa, Florida 33620.*
