Morganella fuliginea Data Sheet

Date: July 15, 2006

Time: 1:00 am

Weather conditions: partly sunny, slight rain

Microhabitat Conditions:

Type of substrate: soil; possibly into a root

Relative humidity: 69%

Canopy cover (%): 88.82%

Elevation: 1530 m

Abundance: 4

Observed growth habit: cluster

Morphological Characteristics:

Basic form: puff-ball

Shape of pileus: spherical

Diameter of pileus: 33 mm

Presence of stipe: no

Shape of stipe: N/A

If no stipe, length and width of pileus: 2.9 mm x 3.3 mm

Color of mature sample: dark brown

Color of young sample: dark brown

Shape of margin (using longitudinal section): coarse, spherical

Texture of margin: N/A

Surface texture of pileus: coarse

Color of Context: N/A

Hymenium or fertile surface characteristics:

Color: N/A

Texture: N/A

Type of juncture with stipe (for those with lamellae): N/A

Space between gills: N/A

Stipe characteristics:

Size: N/A

Color: N/A

Position: N/A

Presence of annulus: none

Location of annulus: N/A

Color of annulus: N/A

Presence of volva: none

Shape of volva: N/A

Color of volva: N/A

Texture of volva: N/A

Color of spore print: N/A

Color of bruising: N/A

Morganella fuliginea

- **Family:** Lycoperdaceae
- **Collection date:** July 15, 2006
- **Collection Time:** 12:40 pm
- **Weather Conditions:** partly rainy
- **Microhabitat conditions at collection site:**

-Type of substrate: soil; possibly into a root

-Elevation: 1530 m

- Observed abundance: 4

- Observed growth habit: clumped; cluster

- **Morphological Characteristics (of collected samples):**

- Basic form: puff ball
- Shape of pileus: spherical
- Diameter of pileus: 33 mm
- Surface texture of pileus: coarse
- Length and width of pileus: 29 mm x 33 mm
- Presence of stipe: none
- Color of mature sample: dark brown
- Color of young specimen: dark brown
- Shape of margin (using longitudinal section): coarse; spherical
- Texture of margin: N/A
- **Hymenium or fertile surface characteristics:**
 - Color: N/A
 - Texture: N/A
