FIELD OBSERVATIONS

Spring Report: March-May 2003. This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations (preferably via e-mail) to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers are found at the end of this report.

Sight-only observations are considered "reports" while only those supported by verifiable evidence (photographs, video or audio tapes, or specimens) are called "records." Species for which documentation is required by the FOS Records Committee (FOSRC; Bowman 2000, *Fla. Field Nat.* 28:149-160) are marked here with an asterisk (*); we no longer publish FOSRC-review species unaccompanied by documentation. A county designation (*in italics*) accompanies the first-time listing of each site in this report. Abbreviations in this report are: BBS = Breeding Bird Survey; CP = county park; EOS = end of season; NF = national forest; NWR = national wildlife refuge; NP = national park; RA = restoration area; SF = state forest; SP = state park; SRA = state recreation area; STF = sewage treatment facility; and N, S, E, W, etc. for compass directions. Bold-faced species denote birds newly reported or verified in Florida, or record counts.

SUMMARY OF THE SPRING SEASON

Landbird migration was somewhat lackluster, although a few good days were reported. At Fort Pickens 25 Apr, a squall line produced a heavy fallout, with 42 species of migrants present. Included among these were large numbers of Yellow-billed Cuckoos, Ruby-throated Hummingbirds, Red-eyed Vireos, Gray Catbirds, Summer and Scarlet tanagers, Baltimore and Orchard orioles, Indigo Buntings, and Blue Grosbeaks. Bob and Lucy Duncan rated it a "10" on a scale of 1-10. At Birch State Park, Fort Lauderdale 26 Apr, over 400 warblers of 16 species were found, including 75+ Common Yellowthroats, and 50 each of Black-throated Blue Warbler, American Redstart, and Ovenbird (Wally George et al.). Sixteen species were seen at Dry Tortugas 21 Apr (D. Powell, W. Biggs et al.), while over 650 warblers of 9 species passed the stationary Green Key Road count 20 Apr (Ken Tracey and Ray Smart).

FOSRC rarities reported this season were the 4 Trumpeter Swans that wintered at Niceville, the Eurasian Kestrel and Cassin's Kingbird that wintered at Lake Apopka, an adult Heermann's Gull in *Okaloosa* in mid-May, the Slaty-backed Gull that wintered at Key West, an Elegant Tern at Fort De Soto, a White-tipped Dove and Long-eared Owl at Dry Tortugas NP, Red-legged Honeycreepers at Biscayne NP and Dry Tortugas NP, and the Green-tailed Towhee that wintered at Moon Island.
