FIELD OBSERVATIONS

Winter Report: December 2008-February 2009.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November); submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers are found at the end of this report. We greatly prefer observations sent via e-mail.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOS Records Committee (FOSRC; Bowman 2006, *Fla. Field Nat.* 34:90-102) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, AFS = Air Force Station, CBC = Christmas Bird Count, CWA = Critical Wildlife Area, EOS = end of season, ff = and following, NP = National Park, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WEA = Wildlife and Environmental Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers.

SUMMARY OF THE WINTER SEASON

This report contains only a few observations from CBCs. FOSRC rarities reported this season were the Masked Duck at Lake City, Least Grebe lingering at Boca Raton, Neotropic Cormorant at Boca Chica Key, Rough-legged Hawk at Edgewater, Black-headed Gull at Cutler Wetlands, California and Thayer’s gulls at Daytona Beach, numerous Iceland Gulls including four at Daytona Beach, Allen’s Hummingbird banded at Lakeland, Say’s Phoebe at Astatula, Tropical Kingbird at Homestead, Cassin’s Kingbirds at STA-5 and Lake Apopka, Harris’s Sparrow at Gainesville, and Bullock’s Orioles at Crystal River and Tallahassee. A Palm Cockatoo in Miami-Dade County furnished the first Florida report of this exotic, while an Orange-cheeked Waxbill photographed in Broward County provided the first Florida record. It was a good winter for Pine Siskins.
