FIELD OBSERVATIONS

Spring Report: March-May 2009.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers are found at the end of this report. We greatly prefer observations sent via e-mail.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOS Records Committee (FOSRC; Bowman 2006, *Fla. Field Nat.* 34:90-102) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, CWA = Critical Wildlife Area, EOS = end of season, FLMNH = Florida Museum of Natural History, NERR = National Estuarine Research Reserve, nm = nautical miles, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, UCF = University of Central Florida, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers.

SUMMARY OF THE SPRING SEASON

Weather patterns created several fallouts of migrant landbirds along the Gulf coast. Twenty-seven individuals of 15 FOSRC-review species were reported this season. Highlights include two species new to Florida—Greater Sand-Plover at Jacksonville and White-throated Swift at Navarre Beach—plus three Northern Fulmars, three California Gulls, six Iceland Gulls, and Florida’s third Loggerhead Kingbird in as many years. The state’s record count of Sprague’s Pipit came from Eglin AFB.
