FIELD OBSERVATIONS

Spring Report: March-May 2010.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <www.fosbirds.org/RecordsCommittee/OfficialStateList.aspx>) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, CWA = Critical Wildlife Area, EOS = end of season, NERR = National Estuarine Research Reserve, nm = nautical miles, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers.

SUMMARY OF THE SPRING SEASON

Weather this season was fairly typical, with high temperatures and sporadic rainfall. Notable fallouts were reported along the Gulf coast, 22 April, 3-4 May, and 5-6 May. A flight of Dickcissels was noted, mainly 26-28 April. Strong east winds brought more than 1000 wood-warblers to Green Key, Pasco County, on 20 April and 11 May. FOSRC rarities reported this season were the Neotropic Cormorant that lingered at St. Marks NWR, Bar-tailed Godwit at Everglades NP, Surfbird at Cedar Key, Thayer’s Gulls at Daytona Beach and Cocoa, Slaty-backed Gull at Daytona Beach, Alder Flycatcher at Gainesville, Tropical Kingbird in Hendry County, Bullock’s Oriole at Tallahassee, and, of special interest, North America’s first Red-legged Thrush in coastal Brevard County. An Aplomado Falcon in Baker County furnished a new exotic for Florida.
