FIELD OBSERVATIONS

Fall Report: August-November 2013.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those observations supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <fosbirds.org/official-florida-state-bird-list>) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, CA = Conservation Area, EOS = end of season, NERR = National Estuarine Research Reserve, nm = nautical miles, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. +Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+).

SUMMARY OF THE FALL SEASON

While Florida was mostly spared from hurricane activity this season, it was a better than average fall migration with good numbers and diversity of Neotropical migrants reported throughout the state. Robin Diaz reported that thirty-three Swainson’s Warblers were banded at Bill Baggs Cape Florida SP throughout the season. An invasion of Black Scoters was first noted in late October, with thousands being reported off the east coast of the state and then reaching the Big Bend region by late November. A potential state’s first Cassin’s Vireo photographed and banded at Bill Baggs Cape Florida SP is under review by the FOSRC. Among other FOSRC rarities were: Bar-tailed Godwit first discovered at Fred Howard Park, a female Ruddy Quail-Dove also banded at Bill Baggs Cape Florida SP provided the fourth Florida record, **twelve** Alder Flycatchers at Frog Pond WMA, four Sulphur-bellied Flycatchers at various sites in south Florida, the state’s second Townsend’s Solitaire at Honeymoon Island SP, and a Varied Thrush was a one day wonder in a yard at Seminole. We welcome Ron Smith as the new compiler for the Tampa Bay region.

This report is dedicated to the memory of Dorothy “Dot” Freeman of Orlando, long-time member of the Florida birding community and charter FOS member, who died 20 October 2013.
