FIELD OBSERVATIONS

Summer Report: June-July 2014.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those observations supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <fosbirds.org/official-florida-state-bird-list>) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, EOS = end of season, NERR = National Estuarine Research Reserve, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMF = Wildlife Management Area, and N, S, E, W, etc., for compass directions. Bold-faced species denote birds newly reported or verified in Florida, or record numbers. +Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+).

SUMMARY OF THE SUMMER SEASON

The weather this season was uneventful. The biggest discovery was Florida’s first Red-necked Stint found at Boca Chica Beach on 16 July by Viktor Nilsson. It was accepted by FOSRC and was seen by other birders through 24 July. A Tropical Kingbird again fledged young at St. Armands Key providing the second breeding record for the state. A male Lesser Goldfinch was photographed visiting a feeder in Melbourne and is under review as a potential first state record. An “Oregon” Dark-Eyed Junco was found at North Anclote Bar on 30 June which provided the first Florida summer record and the first Florida record of this form. Few other FOSRC review species were found this season.
