FIELD OBSERVATIONS

Fall Report: August-November 2014.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those observations supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <fosbirds.org/official-florida-state-bird-list>) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, EOS = end of season, NERR = National Estuarine Research Reserve, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+).

SUMMARY OF THE FALL SEASON

This Fall season the Florida Keys took center stage, particularly Long Key State Park where a Key West Quail-Dove stayed through the season. A Sulphur-bellied Flycatcher, Yellow-green Vireo, and Northern Wheatear were also found at Long Key SP, while at least three Bahama Swallows were counted at Curry Hammock SP during the Florida Keys Hawkwatch.

Other FOSRC species include a Yellow-nosed Albatross photographed off Clearwater Beach, Zone-tailed Hawk at Marathon, Little Gull at Nassau Sound, Elegant Tern at Siesta Key, Anna’s Hummingbird in Ensley, a second state record Western Wood-Pewee at Alafia River SP, and three Sulphur-bellied Flycatchers in southeast Florida.
