This Inland News is brought to you for free and open access by the Searchable Ornithological Research Archive at Digital Commons @ University of South Florida. It has been accepted for inclusion in North American Bird Bander by an authorized editor of Digital Commons @ University of South Florida. For more information, please contact digitalcommons@usf.edu.

total of 2,952 birds banded was only 52% of long term average, and our 79.2 b/100nh was a dismal 52% of average, reflecting a continuing long-term downward trend in our capture rate.

The following table summarizes the best days of the season (>200 banded, >30 species or b/100nh >350).

Date (1)	# Species	# B/100nh	# Birds
29 Sep (2)	35	183	203.9
8 Oct (1)	30	207	193.5
13 Oct (4)	42	449	198.6 ²
22 Oct (4)	34	412	242.8
16 Oct (1)	12	99	352.6 ³

¹ # stations operating.

² Highest species total and highest number banded.

³ Highest capture rate.

Birds of note this year included a Blue Grosbeak (second occurrence in 20 years) and 28 Northern Saw-whet Owls (as the result of more nighttime netting in late Oct to Nov). Among the 29 species with average capture rates at Island Beach in the fall that are above 0.5 b/100nh, only two had above-average capture rates this season: Northern Waterthrush (128% of avg) and Swamp Sparrow (116%). Of the 27 below-average species, 10 species were below 50%: Ovenbird (49%), Winter Wren (47%), Yellow-shafted Flicker (37%), Hermit Thrush (3%), Blackpoll Warbler (33%), Red-eyed Vireo (26%) Golden-crowned Kinglet (23%), Myrtle Warbler (23%), Slate-colored Junco (23%) and Field Sparrow (18%). Of particular note, three of these species with the worst showings this fall are among the top five most banded species at Island Beach— Golden-crowned Kinglet (#1), Myrtle Warbler (#2) and Slate-colored Junco (#5)!

IBBA Annual Report of Birds Banded, 2007

Summary of bandings reported from the IBBA region for 2007:

This is the sixth consecutive year of this report. More effort was put into recruiting reports this season, and this resulted in 86 banders reporting banding a record 123,000 birds and 349 species/forms. Most states doubled the reports of banded birds; Arkansas, Ohio, Oklahoma and Texas were exceptions in being essentially the same. No reports were received from the Dakotas. Reports of banded birds in Canada declined. Texas and Ohio banding represented 26% and 19% of the birds, respectively.

The most frequently banded bird was again one of the smallest with 13,387 Ruby-throated Hummingbirds. Increased efforts by state game agencies to band doves resulted in 8872 banded White-wings and 3705 banded Mourning Doves. American Goldfinch was third with 5984 and was followed by the much larger in size Canada Goose with 5339. White-throated Sparrow was fifth with 3728, Black-chinned Hummingbird seventh with 3563, Tennessee Warbler eighth with 3316, Swainson's Thrush ninth with 3247 and Northern Cardinal tenth with 3156.
