(n) 2.5m	5"							48.00	50.00	55.00

Polyester has the advantage over nylon of being more *water resistant*, thus sagging less when wet with rain or dew and is more *sun resistant* leading to longer *net life*. These nets have the added advantage of *deep bag* afforded by netting that is 200 vertical meshes deep in the 1-1/4-in mesh size (50% more meshes than conventional nylon), and 150 meshes in the 1-1/2-in size. *Deep bag* improves *capture and holding* of birds in nets, and 1-1/4-in mesh size *facilitates removal* because *less tangling*. All are 75-denier, 2-ply thread, tethered for wind protection, and 2.9 m (9.4 ft) in height. They are available as listed above.

2-3/8" mesh nets are made from 110d/2-ply thread. 5" mesh nets are made from 210d/4-ply thread.

The Eastern Bird Banding Association's First Monograph

This monograph summarizes and uses statistical analyses of large amounts of biological data on North American species of birds and is specifically designed to foster their use by other researchers. Hopefully, it will serve the needs of many researchers and encourage others who possess similar data to summarize and analyze them. (Funding was provided by the Eastern Bird Banding Association and the Carnegie Museum of Natural History.)

The monograph contains 184 pages, including Introduction, Methods (data analysis and statistical analysis); Acknowledgments; Descriptive Statistics; Graphs and Statistical Analysis; Appendix 1, showing seasonal composition (percent) of samples of birds analyzed for this study; Appendix 2, summary of results of one-way ANOVAs for age and sex on body mass and wing length; Appendix 3, wing length cutoffs based on birds sexed by physical evidence; Literature Cited; Index of Scientific Names; Index of Common Names.
