This Western News is brought to you for free and open access by the Searchable Ornithological Research Archive at Digital Commons @ University of South Florida. It has been accepted for inclusion in North American Bird Bander by an authorized editor of Digital Commons @ University of South Florida. For more information, please contact [digitalcommons@usf.edu](mailto:digitalcommons@usf.edu).

With the support of the Western Bird Banding Association, SPBO is in the process of incorporating a long-term bird banding program in collaboration with the Klamath Bird Observatory (KBO; based in Ashland, Oregon, USA) and Environment Canada (British Columbia section). SPBO is also planning to provide a bird-banding workshop in coordination with KBO and other organizations and institutions in western Mexico.

This banding program is especially valuable since it will enable us to start creating a knowledge basis for western tropical residents and migrants, enabling us to measure bird population changes and other demographic parameters which will provide valuable information for decision makers in habitat management, restoration and conservation. Socially and economically, this program will translate into education and employment opportunities for local, regional and international professionals and students; it will inform hundreds of villagers, natural-resource decision makers as well as national and international tourists through its community outreach and ecotourism component, thus creating an appropriate social and economic environment for decisions oriented towards habitat restoration and conservation.

## WBBA Annual Banding Summary

There were 185 Master Banders reporting 170,713 banded birds. Compared to 2010, we had more banders (n=164) reporting fewer birds (n=177,108). There were 495 taxa (including BBL-recognized subspecies, races, and hybrids) banded, about the same as in 2010 (n=497). New birds are typically birds from Mexico. Every year I also get a report or two of birds banded in far flung locations in the Indo-Pacific. This year, we had four Black Noddies banded in Guam.

Some personal highlights include 6929 Tricolored Blackbirds banded (and color banded) by Robert Meese, a researcher at UCDavis, and Manual Grosselett in Oxaca, Mexico, whose banders banded 16,542 birds in 185 taxa.

Keeping up with the changing taxonomy of lumping and splitting as well as what is accepted by different ornithological entities (BBL, AOU, field guides, as well as the banders themselves) has been a challenge. The BBL is admittedly behind in keeping up with taxonomic changes; the AOU does not recognize hybrids that the BBL and banders do. The AOU publishes changes once a year, and field guide changes appear with each new edition. And the banders see similarities and differences first hand. Thus, the spreadsheet that accompanies request for banding reports lists birds by common name, alpha codes, AOU#'s, allowing the bander to sort; however, here I present common names and alpha codes to save space.

Last, I thank H. Williams for perusing this long list for errors and anomalies. For example, the Aplamado Falcons seem odd for ID, but they were captive bred birds released within their range in AZ-NM-TX. I guess at issue is whether these birds should be reported for AZ-NM-TX or ID, something that I have not resolved. As always, all errata are still my responsibility.

*Walter H. Sakai*

# WBBA ANNUAL REPORT OF BIRDS BANDED, 2011

**A summary of banding with USFWS/CWS bands reported from WBBA area for 2011**

compiled by:

Walter H. Sakai, Santa Monica College, 1900 Pico Blvd, Santa Monica, CA 90405

sakai\_walter@smc.edu

Codes in the HIGH BANDER column refer to the list of individuals or institutional banders.

Numbers in ( ) are individual totals

Upon request we can supply a list of all banders for a species or the results with AOU# and/or species codes
