This Western News is brought to you for free and open access by the Searchable Ornithological Research Archive at Digital Commons @ University of South Florida. It has been accepted for inclusion in North American Bird Bander by an authorized editor of Digital Commons @ University of South Florida. For more information, please contact [digitalcommons@usf.edu](mailto:digitalcommons@usf.edu).

Virtually unknown to ornithologists, the Central African nation of Equatorial Guinea has vast tracts of pristine Congolese forest which is home to a dizzying array of wildlife. Recent discovery of oil there has turned one of the world's poorest nations (per capita) into the richest one in Africa. Rapid development is occurring and bird populations, subspecies, and species are at risk of being lost

before they are even discovered. A group of ornithologists, funded by the National Geographic Society, has begun a long-term partnership with the Equatoguinean government to document unknown and sensitive avifauna. Jared Wolfe, a member of the Equatorial Guinea Bird Initiative team, will introduce you to the birds, forest, and people of Equatorial Guinea, arguably the country least known to science.

Yellow-breasted Chat

### WBBA 2013 Annual Banding Summary

There were 161 Master Banders reporting 162,892 banded birds. Compared to 2012, we had one fewer bander, and slightly more birds (735) were reported. There were 510 taxa (including BBL-recognized subspecies, hybrids, and a few unknowns) banded, 13 more taxa than in 2012. New birds are typically birds from Mexico.

**Some highlights:** This year we again have Manuel Grosselett in Oxaca, Mexico whose banders banded 27,254 birds in 191 taxa, including 4012 Gray Catbirds, 3553 Yellow-breasted Chats, and 3786 Swainson's Thrushes. In the western U.S., Robert Meese at UCDavis banded 3090 Tricolor Blackbirds, while studying the precipitous decline of this species in recent years.

Keeping up with the changing names and the taxonomy of lumping and splitting as well as what is accepted by different ornithological entities (BBL, AOU, field guides, as well as the banders themselves) has been a continuing challenge. The BBL is admittedly behind in keeping up with taxonomic changes; the AOU does not recognize

hybrids that the BBL and banders do accept. Banders also have a category for unknowns (e.g. unknown flycatcher). The AOU publishes changes once a year, and field guide changes appear with each new edition. And the banders see similarities and differences first hand. Thus, the spreadsheet that accompanies request for banding reports tries to accommodate this by listing birds by common name, alpha codes, AOU#'s, allowing the bander to sort; however, here I present common names and alpha codes to save space. Of course, there is the impending six-letter (first three letters of the genus and species) codes presented on the IBP website and already widely used in Latin America.

As we try to embrace Latin America in the banding of birds, Mexico presents an interesting dilemma. Even with just three reporting banders, Mexico reports more banded birds than all of the other artificially created regions except California.

A lot to think about.

**Walter H. Sakai**

# WBBA ANNUAL REPORT OF BIRDS BANDED, 2013

A summary of banding with USFWS/CWS bands reported from WBBA area for 2013

compiled by:

Walter H. Sakai, Santa Monica College, 1900 Pico Blvd, Santa Monica, CA 90405

sakai\_walter@smc.edu

Codes in the HIGH BANDER column refer to the list of individuals or institutional banders.

Numbers in ( ) are individual totals

Upon request we can supply a list of all banders for a species or the results with AOU# and/or species codes
