Danielle Riley (DR): Okay, today is Tuesday, July 6th, 2004. My name is Danielle Riley, graduate assistant for the Florida Studies Center. We continue a series of interviews in our studio here in the Tampa Campus Library with USF faculty, student, staff and alumni in order to commemorate 50 years of university history. Today we will be interviewing Scott Wilkinson, who came to USF in the fall of 2001, and he is a student and he currently serves as inter-fraternity council president. Good afternoon Scott.

Scott Wilkinson (SW): Hey.

DR: Let's start with your decision to come to USF.

SW: All right.

DR: Where are you from and—

SW: I'm originally from Louisville, Kentucky. I grew up there my whole life. My mom actually graduated from USF. She was born in Florida and she kind of—this was the only school I applied to far away from home. So, that's a long way, about 800 miles. And I just decided to come check it out. I came and checked it out in the winter, and it was nice and warm and sunny, so I decided to try it out and see if I liked it.

DR: Um, had you been here before that time?

SW: Never been this far south before.

DR: And what did your mom say about it? Did she—

SW: Oh. She said it was up to me. She had a close friend who lived nearby that if I got into any trouble I could go to, so she wasn't too worried. She knows she had a good experience here, so she knew it was a good school and—

DR: Did any of her experiences that she told you about growing up stand out and make you want to come here?

SW: Not really. She just said—she's always for trying new things, and she figured I could always just try it out and if I didn't like it I could always go back home. And I got here and I loved it, so—

DR: So this was the only Florida school.

SW: Yeah. It was Florida and everything else in Kentucky.

DR: Okay. When you first saw the campus, what did you think? What were your impressions?

SW: Oh, palm trees. Just everything I wanted in a school campus, so—growing up in Kentucky we really don't really have anything but hills and trees, so—and we go on vacation every year to Florida, so I really love the beach and just everything about Florida. It's just a really beautiful campus. You just walk on it and makes you feel—just makes you just feel comfortable. It puts you in a good mood, like I don't see how you could—makes it easier going to class. Walking by the campus is just beautiful.

DR: And did, so you said came to vacation in Florida?

SW: Yeah.

DR: But not in Tampa?

SW: Not this far south Florida, more northern Florida.

DR: So what—did you make the decision as soon as you set foot on the campus, or—

SW: No. It took me about a month or two just to make sure I wanted to go that far from home. It was—out of all the campuses I visited, this was definitely the nicest campus walking around. I liked it the best out of the four schools I applied to. But it just took me awhile to decide if I wanted to try to go that far away from home. I had never spent that much time away from home, so but I figured I just try it out and see how I liked it.

DR: And your first semester was fall 2001.

SW: Yeah.

DR: Did you move here during the summer before then?

SW: Actually I didn't move until a week or two before school started. So—

DR: And did you move on campus?

SW: Yeah. I lived on campus my freshman year in Lamda Hall. It's one of the dorms in Argos I think.

DR: And what was that like?

SW: It was awesome. I recommend staying in dorms to anybody coming to USF. Definitely you get the full university experience staying in the dorms as opposed staying off campus. You always know—there's something going on every night, every day. You find out about everything that's going on on-campus. It's just—you meet so many new people. It's definitely worth it.

DR: Are there any programs that you did to help you get to know the campus?

SW: Um, I didn't actually take the University Experience class. Pretty much joining the fraternity was what got me involved the most on campus because I guess I found out a lot more things going on campus doing that. It wasn't really—I mean there's flyers all the times in dorms that kind of sowed events and stuff that I kind of paid attention to that. It wasn't—

DR: So you got involved in the fraternity obviously.

SW: Yeah.

DR: How did you even find out about Greek life?

SW: Actually, I was just walking around on campus one day, and there were guys walking around passing out flyers that, kind of telling about it. And then, I just went over and hung out with some of the guys and just got real involved. [I] started hanging out with them every day and then finally decided to go through recruitment week.

DR: Let's talk about recruitment week.

SW: Okay.

DR: How was that?

SW: It was fun.

DR: When was this by the way?

SW: It was the second week of school I think.

DR: So still in the fall?

SW: Still in the fall semester.

DR: Right away. Okay.

SW: Actually I wasn't suppose—I wasn't going to join a fraternity at all. Parents were way against it. And then—but then I met—I didn't have any friends coming here. I didn't know one person here when I got here. So, I just met this group of guys, and there was about 20 of them at that—no not even. Right at 15, 20 of them at the time, and they were all real cool. I mean it was pretty much having a home away from home kind of for me. Like it was guys who were there for me when I couldn't go to my parents or anybody else I didn't know so—

The recruitment week itself, it was the second week of school. It was actually, it was real awesome because you have to go out, and there was, I think, 15 fraternities on at the time. And all 15 of those chapters had all their guys come out and hang out, and you got to meet all the guys. And then pretty much figure out where you kind of fit in I guess, you would say.

DR: And what kinds of things do you do?

SW: Each night actually has a different theme. Some nights—the main night was called tradition night and each fraternity has their own different tradition or whatever. And you pretty much have this really nice dinner and then they have some speaker, I guess an alumni [sic] usually comes and he speaks, gives a big speech. [He] kind of tells about what their ideals are and what they're about. The rest of the week, there's game nights and stuff. Like you play cards and stuff, or they have big blow up punching bag—like the moonwalk things that you bounce on. And you do that. There's different things to interact with the guys, different types of games. Usually lots of food. Those are good, so—

DR: And did you have your eye on just one just fraternity or was there—

SW: You really shouldn't have your eye on just one fraternity. I did just because I met the guys. I had been hanging out with them for a week or two before I went into the recruitment week. But most the guys who come in don't really know—haven't met anybody so, they go out and they meet—they get a chance to meet all 17, 15—we have 17 now, but then it was 15 chapters. And they can just pretty much figure out where they're going to fit in best, but that's probably the best way to go at it. I personally had my eye set on one individual because I knew those guys were the guys I wanted to hang out with, so—

DR: And did they have a house?

SW: Yeah.

DR: Did they have anything on campus at the time?

SW: The guys I—the fraternity that I joined actually was the only fraternity that had a house at the time, and it was just off campus on 42nd Street, so—

DR: So this was before anything was built on campus in that area?

SW: This is before anything, yeah.

DR: And the name of your fraternity is?

SW: It's uh Phi Delta Theta¹.

DR: And so let's talk about what are some things specific to Phi Delta Theta. What are they about?

SW: Um. Phi Delts, um they're—our motto is actually “One Man is No Man.” So we're about coming together all as, pretty much coming together all as a whole, not just being individuals but being a group, as in one man is no man, like we all stick together. We pretty much share the same values and morals, you know, stuff like that. Pretty much we lean on each other for everything. Um, we're really strong on brotherhood. That's like our main thing is brotherhood. Like a lot of guys in our chapter are from out of town and they're a lot of guys who came in and didn't know anybody, and then now we just meet so many new people.

DR: Do you think that's a linking thing in your fraternity?

¹Phi Delta Theta was founded in 1848 as a secret organization by six undergraduate students, who are now referred to as The Immortal Six by fraternity members. The three principal objectives of the fraternity have remained unchanged: “the cultivation of friendship among its members, the acquirement individually of a high degree of mental culture, and the attainment personally of a high standard of morality.”

SW: Ab—Definitely. It's definitely the thing that keeps us together is our brotherhood and knowing that if something goes wrong, you got 25, 30 other guys you can call to help you out. And they'll always be willing to help you out no matter what it is.

DR: And are many of them from out of state?

SW: A lot of our guys are from out of state. A lot of the chapters here on campus, a lot of the guys are from Florida, but you have lot guys from out of state though that join fraternities just because it gives them that home away from home, so I think personally, that's why I think a lot do it that are from out of state. So—

DR: And how many members are in the fraternity?

SW: Um, I want to say there's between 45 and 50 in my chapter.

DR: And are you still in the same house?

SW: Yes. Storing stuff, same house.

DR: So you were living on campus. Did you stay on campus in the dorms?

SW: Yeah. I stayed on campus my whole freshman year and then my sophomore year, the fall of 2002, I moved into the house.

DR: Okay, okay.

SW: For a year.

DR: For just one year?

SW: Yeah. I just lived there for a year.

DR: And is that normal? Do you just live there for a year usually?

SW: No. Some people live there the whole time they're in school. You're required to live there for a year though. So, but a lot of guys move in there and then they don't want to move out. You wake up every morning, and you've got 16 of your best friends just living right next to you. You can go knock on their door and hang out, do anything, so—

DR: And what's it—what else is it like to live there? Do you have a cook or cafeteria?

SW: No. We don't have a cook but we have—I mean we have—it's—our location for [the] house is really awesome because we the Campus Quick right across the street, 24-hour convenience store. And then we also have a rec room there with a big screen TV, pool table, so anytime you want to go in the rec room there's always guys in there playing pool. We have a full kitchen in there actually with just all this stock of food and drinks. So, I mean it really is kind of like a home away from home. So, it's just like living with your best friends pretty much.

DR: Are you allowed to have parties there?

SW: We are. There's no alcohol allowed though. It's a—Phi Delt nationally is a dry fraternity, so we don't have any alcohol sponsored events. But I mean, I don't know what you consider a party, but—

DR: Do you have any official parties during the year that you put on?

SW: We have super bowl parties and stuff like that. But there's just no alcohol allowed or anything.

DR: And is it difficult to balance academic life and fraternity life?

SW: Oh. Hones—I think being in a fraternity has made me more responsible because I have to figure out a way to balance them both or else I'll have to drop one of them, obviously being the fraternity. But, I think it's made me a lot more responsible. It really teaches you a lot. It really prepares you a lot for what's after college because it teaches you how businesses are kind of run. Because it's kind—I mean it is a group of guys who have strong brotherhood and are friends but on the other hand it's also a business that has to be run. You have to collect dues. You have to—I mean you have to do so many different other things. We do community service projects. We have to set up golf

tournaments, stuff like that. So, you really learn how to, kind of how businesses run and pretty much you have to learn how to manage your time real well because you've got school and then you've got the fraternity.

In my case, I got inter-fraternity council, so I really learn how to manage my time well just from—and you have a lot of mentors also. Like a lot of the older brothers who are seniors and juniors when you come in, they really help you out a lot too. Like they can tell you, like a lot of times they help you with classes and stuff. You always have guys who are in the same majors as you. And then it really helps out a lot to have those older guys there to kind of guide you along and start you off.

DR: Do you have one specific person—

SW: Yeah I do—

DR: —who was assigned?

SW: His name was Dave Minberg. It's [sic] actually one of the first guys I met. When I met him he was the vice president at the school at the time. And he really—he was a—we have a thing called a pledge master who's a guy in charge of all the new members who come into the fraternity. And he was our pledge master at the time. And he pretty much pushed me my hardest. He's the one who got me involved a whole lot in everything else outside of just the fraternity. He was the one who pushed us [saying], "You need to go join these other organizations at campus, get involved." He pretty much—he really helped me out a lot.

DR: And he's vice president of the student council at one time?

SW: He was. Two years in a row. So—

DR: Do you know what years?

SW: The year before Omar. He was with Mike Griffin. It would be 2001 and '02, and '02 and '03.

DR: And let's talk some about the community service you mentioned.

SW: Yeah.

DR: What sort of things do you do?

SW: Well, Lou Gehrig² was actually a Phi Delt. So all of our community service goes to the fight for ALS, which is the disease he had—was another name for it. We had one community service project in the fall and one in the spring. I'm pretty much—it's kind of—there's community service and there's philanthropy. We did the philanthropy, which was like you set up some time type of event to bring out other organizations that they involve [sic]. It's usually a sporting event like a kick—we did a kick ball tournament and a basketball tournament. You get all the other organizations to sign up and then they donate money, or you charge a team fee to play in the tournament. They get trophy for winning but then all the money goes to the organization that we're supporting, which is Lou Gehrig's Disease. And the good thing is though, every weekend there's usually a philanthropy event going on by a different sorority or fraternity, so—

DR: And you all get involved?

SW: Yeah, and then in turn we participate in theirs so then they all participate in ours. It kind of goes round and round pretty much. The community service is more we, um we go to hospitals and stuff and hang out with children and stuff like that. Around Christmas time we went this year and hung out with the kids at the University Hospital and the Moffitt Cancer Center. And then the inter-fraternity council itself has a relationship with—it's called the University Community Center, and that's where a lot of kids—and they're middle school and elementary school [kids] who kind of come in from bad backgrounds. They all go after school and we always have—like we have Greek Week³ and homecoming, we always go out there and hang out with them. And then just every—probably every other weekend there's usually a different group out there, going out there just doing crafts and hanging out with the kids and stuff, so—

DR: So, let's back up and tell me how you got involved with inter-fraternity council.

²Lou Gehrig was an American professional baseball player for the New York Yankees. His nickname, "The Iron Horse," attested to his athletic prowess, and he was the first major league baseball player to have his uniform number retired by the team. His career was cut short by ALS, and incurable neuromuscular disorder now commonly referred to as Lou Gehrig's disease.

³a week-long celebration amongst the social fraternities and sororities on campus in order to unite the different organizations in brotherhood and to show pride in being a member of an individual organization

SW: That was actually another one of my—the older brothers who—his name is Cash E. Lee. He was the inter-fraternity council president at the time, and he was one of our older brothers. He was good friends with Dave, and they were the ones always pushing me. And he was just like, Hey you should come out and check out our meetings one time. So I did, and then they were telling me about open positions, so I took one of the little positions at first. And so I just started going to meetings often. And then as time went on, eventually I ran for treasurer. The next year, it would have been my sophomore year, I ran for treasurer, and I got elected to that for the inter-fraternity council. And then [I] spent a year on that. And then I just ran for president and got elected to that.

DR: This past year?

SW: Yeah. The terms run from the spring and the fall, so I was president this past spring and then my term ends in the fall.

DR: So 2004—

SW: Yeah.

DR: —all the way through—

SW: It's just 2004.

DR: And is it difficult? I mean, these meetings are separate from the ones you already have—

SW: Yeah.

DR: —for your fraternity.

SW: I have—the most of the fraternity meetings are all on Sunday nights. Pretty much all of them are Sunday nights. And then the inter-fraternity council meetings are usually during the week on Wednesday nights and Tuesday nights and stuff.

DR: And how demanding is it?

SW: Um, sometimes it gets a little demanding. I'm doing an engineering major also, so I usually have a lot of homework to do. It's just, I mean really, if you know how to manage your time well, you can do it. And I have a good support group around me, other officers on my board that help me out a lot, so they kind of pick up my slack when I start to slack, or they let me know if I am.

DR: What kind of—what are your duties as a president?

SW: Um, really uh, pretty much to oversee—now that we have all these new houses on campus, it is a wet campus so they are allowed to have parties over on the house on campus. One of our main goals for the past year now that the house—this is the first year the house has been there—has been risk management. Trying to reduce the risk that these houses have over there. We've been setting up different processes to uh kind of make sure their parties are run efficiently.

We have actually a form that anytime they want to have a party over there. They have to fill out certain form to let us know that they're having a party, and then we have a board set up that goes over to their party when they're having it and make sure that they're doing the right things. Like they have to have people at the door checking IDs. They all have to wear wristbands. There's no liquor allowed whatsoever. They have to— it's usually bring your own beer. Then they have to—the person who brings the beer gets to tickets when they turn in the beer. To get a beer back, they have to give them tickets and everything. So I mean, it's really set up to reduce the risk of having—having as few risks as possible when they're having these parties. And that's been one of my big things the whole—since I've been president—is trying to figure out how to set this process up so the fraternities don't get—you know they get kind of mad sometimes and—

DR: Yeah. I was going to ask about that. Is that difficult? Are you face with problems because of it?

SW: It was at the beginning because it was new to them, but now we've kind of—like we have a good relationship with the chapter presidents and stuff now. They're real good guys. They understand where we're coming from, and they kind of know that this is a step we have to take or else serious things could happen. Like we see news stories all the time now about bad things happening with fraternities and parties. People getting drunk and stuff. They know the risks too, so they cooperate with us usually. So at the beginning it was kind of rough. It was a new thing, and they had never seen it before, but as time went on they—it finally started to sink in their heads why we're doing it and what the— pretty much, yeah.

DR: Well let's talk about the reputation of fraternities.

SW: Oh, reputation.

DR: And have you faced any problems because of that yourself.

SW: Um, I mean, I myself haven't had to face any yet. [The] reputation of the fraternities across the nation is pretty bad I'd have to say. But on this campus, we really haven't had any problems with the stuff you see everywhere else. Like there's really—since I guess it might be because we're such a new school, maybe there's not as many traditions here yet. So like, we don't have like the hazing that you hear about. In the past five years, they're implementing all these new laws about hazing, so hazing has pretty much been almost weeded out. Like you—like I've been to a couple of schools across—I have gone to couple schools and visited, and like you rarely ever see it anymore. They think that we drink and party all the time. And that's why—I mean we—we're trying a more—take the fraternities where they're supposed to be. What they were brought up—actually started to be. Like that's why we're doing the community service, the philanthropy projects, stuff like that. Like that's what they were started for was to do stuff like that. Not to just go out and party and, you know everything else.

DR: Do you feel like the fraternities have a solid connection with Tampa, and the city, and maybe businesses?

SW: Um, yeah because there's a lot of alumni out in Tampa and the businesses that come from these fraternities themselves. Like I meet guys all the time now, they're like, Hey you're a Phi Delt. You know I was a Phi Delt too, and like they give you their business card and stuff and everything. So in the surrounding communities, real supportive of the fraternities around here. Just like around this area because they're always doing contests. Like, just last semester there was a restaurant—I think it was Pita Pit—doing a contest for whichever fraternity bought the most pitas gets a free party, stuff like that, so they're real supportive of us usually.

DR: And do you feel like or how do you feel like the fraternity will help you in the future once you graduate?

SW: Any fraternity?

DR: Or what you've done, you know.

SW: Um, well like I said earlier. It prepares you for um, what's after college. Like how businesses are grown and stuff. It prepares you for those types of organizations. And then it's also—it really does give you a lot of connections. There's a lot of alumni out there who work in these big businesses, and they're more than willing to help out their fraternity brothers, so you get a lot of connections through fraternities.

DR: What about your personal connection with Tampa? You were new here. Do you feel like—did you—were you in kind of stuck on campus or did you venture out a lot?

SW: Yeah. When I got here, like I was like, wow. It's just this surrounding area was like all I ever used see. Like I used to go off campus a little bit and that was it. But as I started to meet more people, like I meet new people every day just getting introduced and like I actually met some guy this past semester. He gave me free tickets to a [Tampa Bay] Buccaneers football game just because I was a Phi Delt. So I mean, it's just—like I know some—I know people everywhere in Tampa that work everywhere just from—not just the fraternity itself but from IFC and everything else, just getting involved on campus. You meet so many new people. Like I met Dr. Genshaft⁴ just recently. We had a luncheon with her and stuff like that. So it really helps out a lot getting involved on campus, not just fraternities but getting involved period. You meet so many new people, and they're the ones that you need to be meeting now to help you out later.

DR: And one big thing we're missing here is your academics. So let's talk more—

SW: Yeah um.

DR: What kind of engineering are you studying?

SW: I'm an industrial. I started out mechanical engineering. Now I'm industrial engineering. A lot of people say, they're like, Oh when you pledge, your grades are going to be terrible. My grades when I pledged were pretty much some of the best I've had since I've been at school. And then it was after that, after you get through pledging, I was like, kind of sunk. But then as—now that I'm getting into my junior and senior year like, you start to realize these grades are what—you need to make good grades, so grades always come first for me now. Like if I have a test or something or meeting, well I

⁴An interview of Francis Borkowski is available as part of the USF 50th Anniversary Oral History Project collection.

usually—now I get to schedule the meetings, so I don't schedule them when I have tests but grades always come first for me.

And I think that being in the fraternity has actually helped out a lot because you got those older guys who tell you what teachers you want to take. They can tell you, Hey this teacher, you don't want to take him or her because you know, they're bad. So you have those people older than you that kind of help you out. You meet—the best about it is, you've got so many other brothers in your same major that you've got people to study with. And they help you out.

DR: Do you have a lot of people in industrial engineering?

SW: Me personally, I don't. But I mean, I still have other brothers who are engineers and we just, we'll call each other up. "Hey do you want to go the library?" So you got guys who go to the lib—it's all about being motivated. And if you got people to motivate you, like with you, like all my brothers. We motivate each other just to get on your grades.

DR: Do you have study time?

SW: As a pledge you have study time. That's one of the areas where we're kind of lacking in our fraternity, in our chapter itself. It's that scholarships are our next big issue that we're going to tackle. So, but a lot of the chapters do have study hours. I know all the sororities do and lot of the fraternities, they have study book. They have a study log—books in the library on one of the floors that they have to go and they fill out like once a week, I think they have to—I don't know how many hours they have to do a week, but um we specifically don't. But um, the chapter president always sees the GPAs of members and stuff. And when guys start slacking, like people, like all the other brothers get on you because they don't want you to have to drop the fraternity to get your grades better.

DR: Do you have a room in the house that you study or do you study in the library?

SW: Um, I usually study in the library. We have the recreational room. There's a desk in there and computers with Internet in there and stuff. And a lot of people do studying in there during the day because it's usually pretty—I mean it stays pretty quiet in there usually except for at night. But um—and then sometimes there's apartments open that you can go study at. And there's always somebody in the house studying that you can go study with them so.

DR: So, what is industrial engineering like on campus? What do you—

SW: Oh.

DR: Is it a small school?

SW: Industrial engineering is probably one—I would say the smallest engineering on campus.

DR: And what made you chose that?

SW: Um, industrial engineering really—it gives you—once you get out of school, you have a lot of options on what you can do as an industrial engineer as opposed to other engineers. You're kind of stuck in one area. Industrial engineers can do almost anything they want. Like, it pretty much teaches you how to make the right decision, make the right choices, so—

DR: And, if it's that small of a school, do you know your professors and—

SW: Oh yeah, I know all my professors—

DR: —fellow students.

SW: —by name. You have the same students in all of your classes. So it's really good because like you get to know those people, and you're with them for like two years in the same classes. You're always helping each other out so—

DR: And have any particular professors made an impact on you?

SW: Um, not quite yet just because I've only been in—this will only be my—I'm only going into my second semester as an industrial engineer because I was mechanical before that, so I've only really had one semester of actually industrial engineering classes. So I haven't had anybody quite yet. I mean I could probably pick out some people who I like a lot who I think are great teachers, professors.

DR: Well have—what about any of your classes? What is a class like at USF as an undergrad?

SW: Um, I think—I mean a lot of the classes are—that I take are real—they're kind of small. The good thing is all the professors I've ever had, they're always willing to help you out of class anytime you want. Like they all, like they always stress office hours, office hours, office hours. Like they want you to come to their office and get help. I've never had a professor that's been bad about that. All the professors I've had have always tried to get you to come to their office. They try to get you to ask questions. They all want you to learn. They're not—it doesn't seem like they're here to teach just to get—just to make their money. It seems like they're here because they like to teach and they want to get—like that's the thing they like to do. And they like to help out the students, so that's the good thing I've found about the professors here.

DR: And you said your main focus is your grades—

SW: Yeah.

DR: —so does that mean that maybe you want to go on after you get your bachelor's degree or?

SW: And be a teacher or—

DR: Or for another degree?

SW: Oh no. Oh yeah. I definitely plan on doing the graduate school.

DR: What are you—

SW: Actually here at USF it's called a Master's in Science and Engineering Management. I think there's only—there's not many universities across the country who have that program. And it really teaches you—it's kind of like a business degree that goes along with an engineering degree, just like a business degree for engineers. So it's kind of cool. I'm really looking forward to taking that actually.

DR: So that's your plan after you graduate?

SW: Yeah. Right now.

DR: What is the projected graduation date for you right now?

SW: December '05, hopefully.

DR: And I guess let's just um, I'd like hear what you would recommend to a new student coming to USF.

SW: Um, well any new student coming to USF, I would recommend pretty much [to] get involved on campus. Without getting involved, you really go to class and that's it. You don't really get the whole college experience, and it doesn't really prepare you for what's after college. If you go to school and you get involved with different organizations, like you meet so many different people. It just really prepares you for what's after college and I think that's the best thing you can do.

DR: What—so how do they break into though? What's the first step, do you think, to getting involved?

SW: First step to getting involved. Um, I would suggest that anytime you see—there's always advertisements on campus for different events going on—like people chalk the sidewalks every day. They pass out flyers every day. Usually people just throw them away. They don't even pay attention, but a lot of those things are really informative and like I would suggest anytime you see a flyer, just always read it. Check it out. You never know what it's going to be like. I mean, just always go check out the things. They always have free food and everything. At least go for that, and you never know what you might end up liking, you know. Like I never thought I would be in a fraternity and I go and check it out and here I am three years later president of all the fraternities, so—

DR: Exactly.

SW: Yeah.

DR: Well thank you so much Scott. I appreciate it.

SW: You're welcome.

DR: And good luck.

SW: All right.
